- Antivirus and antimalware software
- Application security
- Data loss prevention
- Email security
- Firewalls
- Intrusion prevention systems
- Mobile device security
- Network segmentation
- Security information and event management
- VPN
- Web security
- Wireless security

SECURITY

Protect your customers and secure your business

Digital technology has the potential to transform almost every aspect of a financial services company. But new levels of efficiency and capability can also lead to a significant increase in potential security challenges.

Mobile devices and bring your own device (BYOD) increase the threat of malware, spyware and unauthorised access even further. Cloud has created more potential for account hijacking and DDoS attacks, and wireless connectivity can also mean new opportunities for malicious hackers.

Have peace of mind with TAS expertise

With over 30 years of experience helping banks, building societies and insurance companies, TAS has the knowledge to make sure your corporate and customer information is safe.

Security is at the heart of everything we do, and our policies, procedures and on-going monitoring offer far more protection than most companies could ever achieve in-house.

APRA aligned and PCI compliant

Of special importance is our understanding of compliance regulations. Our services are PCI DSS compliant and are strictly aligned with APRA standards and guidelines, so you can be confident that we will help you meet all the requirements for business continuity, risk mitigation and data security.

See where you stand with our specialist consulting services

In addition to the security built into your TAS provided services and solutions, TAS can also offer expert advice on your company's compliance measures. Through our team of InfoSec consultants, we'll provide an independent evaluation based upon our security experience within the financial services industry.

APRA CPS 234 Readiness Review

APRA's new CPS 234 regulation highlights the importance of cyber security in the digital age.

APRA's CPS 234 is designed to make sure that APRA-regulated entities are resilient against information security incidents.

Through up to the minute compliance knowledge, TAS can help you avoid damage to your company by providing an independent evaluation of your security measures in relation to these new mandatory requirements.

Our CPS 234 Readiness Review is a simple way to make sure you are on the right track. It involves an initial kick off meeting, on-site or teleconference interviews with key stakeholders, offsite assessment, report preparation and presentation to the board or senior management. The cost of the review can be offset against any future compliance services.

PCI DSS Analysis

The Payment Card Industry Data Security Standard (PCI DSS) has been designed to prevent theft of cardholder information.

With cards being used for an increasing number of payments, financial institutions have a growing need to ensure that they safely accept, store, process, and transmit cardholder data during transactions.

While most financial institutions have policies and procedures in place, it pays to make sure that you are compliant with every detail of The Payment Card Industry Data Security Standard (**PCI DSS**) guidelines even if it isn't a mandatory requirement for your organisation.

Our PCI DSS Analysis is a top line review that can help you avoid the real threat of litigation, penalties and damage to your reputation.

About TAS

TAS is a leading provider of end-to-end cloud solutions to highly regulated industries. Since 1989 we have built our reputation through unmatched levels of availability, compliance and quality of service, and we currently support over 40 percent of all Australian tier two and three financial services companies
