

## **End-to-end cloud solutions for the financial services sector**

## **NETWORKS**

### **Accelerate performance across an expanding workspace**

In a modern business environment, the demands on a corporate network have never been greater. As well as connecting multiple physical sites, today's solutions must integrate a whole range of new technologies and streamline communications across a digital perimeter that's expanding by the day.

Added to these challenges is the urgent need to increase bandwidth for data-intensive activities like video, VOIP and data analytics, while also containing costs.

### **From planning to ongoing management**

TAS has been providing networking solutions to the heavily regulated financial services industry for over 30 years. We'll help you create a solution that connects every aspect of your operations, from data centres through to branches, mobile users and into the cloud.

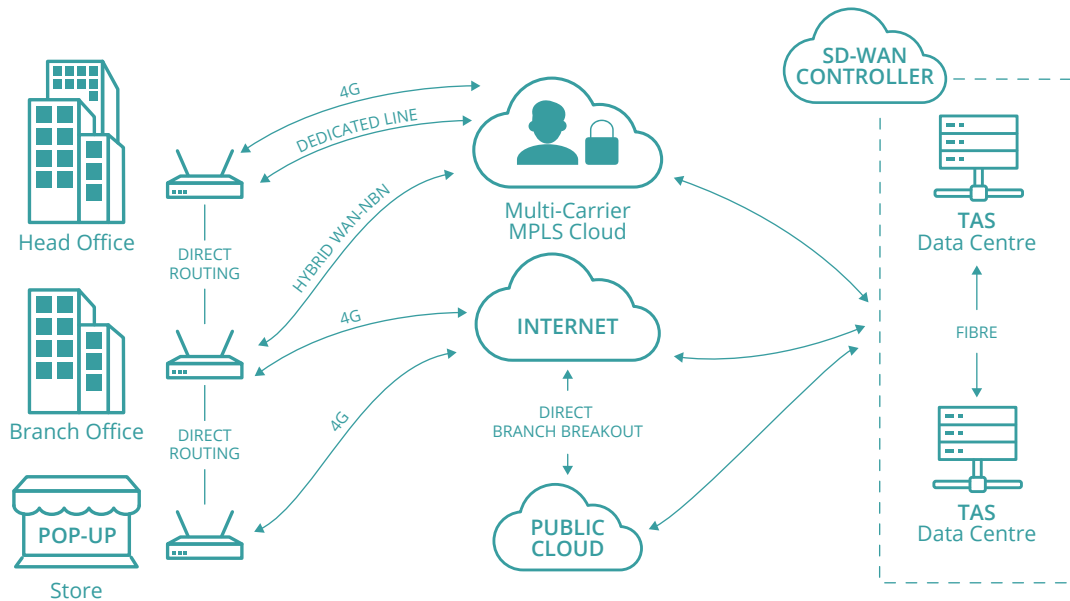

Through our experience we can provide you with a strategy that clearly demonstrates the value of our solution. Our proven IP will help get you up and running in record time and our optional management services can keep your network operating at peak performance.

### **Wrapped in security**

By combining multiple layers of defence and implementing policies and controls at key points, TAS will make sure your customers and your business are always protected, no matter where users are located.

TAS network solutions are protected by appropriate security measures to ensure that end-points, branch offices, head office, TAS data centres and the public cloud are all secured.

# Increase speed and contain costs with TAS SD-WAN

Built on leading Cisco SD-WAN technology, TAS SD-WAN can dramatically boost your bandwidth by adding cost-effective internet, 4G connections to, or instead of traditional MPLS networks.

## Dynamic performance tuning

As a software defined solution TAS SD-WAN reduces performance issues and bottlenecks by automatically determining the fastest route across a network.

## Available and secure

A TAS SD-WAN solution increases availability by eliminating single points of network failure. Devices are managed and authenticated through a software-defined interface and security is further enhanced through integrated multi-point security, encryption keys and networking segmentation.

## Rapid large-scale implementation

With simple connections to data centres, cloud and SaaS providers, TAS SD-WAN can connect thousands of endpoints and routes across widely dispersed networks.

## About TAS

TAS is a leading provider of end-to-end cloud solutions to highly regulated industries. Since 1989 we have built our reputation through unmatched levels of availability, compliance and quality of service, and we currently support over 40 percent of all Australian tier two and three financial services companies
